# Copy management and content protection

- FASTCOM has developed techniques and solutions for content protection and management. This allows to
  - **“build dynamically domains where the acquisition, consumption and exchange of content is allowed only for and between authorized devices”**
- Detailed definition
  - . Authorized Domain: Collection of devices controlled by members of a single household
  - . Content Protection: Protected content is exchanged or stored by means of authentication, confidentiality and integrity
  - . Content Management: A license attached to the content defines how content is acquired, exchanged or consumed
- Value added: allows the dynamic management of secured communities for sharing and managing content
- Examples of applications
  - Management of protected content for devices within a digital home network (mobile phone, PDA, car, PC...)
  - Management of protected content in a professional network
  - Acquisition and consumption of legal protected content from a web or private server
  - ...

# Example of implemented scheme (DVB-CPCM)

## A. Content Provider
